

LESSONS LEARNED TEMPLATE

CONTENT TITLE [enter the content area for this lesson, e.g., food distributions, financial payments, community engagement, hygiene trainings, etc.]:

Please describe the following about this 'lesson' in as much detail as possible:

HYPOTHESIS: What we expected to happen.

LEARNING: What actually happened (use data and evidence where possible).

SUGGESTION: What we should do differently in the future.

Critical to the success of this process is identifying issues that will have an impact on the Aspirations and Results envisioned for the program. In the Session 5 exercise, these should be identified by looking for shared themes and connections across the Strengths, Opportunities and Aspirations/Results and what some of the areas identified as worthy of replication/scaling, or that need adjustment to get better results. As an issue or piece of 'shared content' is linked to an Aspiration, think about what that is, what the Result of doing it would be, and how it can be achieved and make specific recommendations for accomplishing it. Consider the following:

- Decide on themes or issues, and complete this template for as many as you identify
- Prioritize and make sure these are things that are most important for the program to implement
- Also be realistic about what is possible within the limits of time, budget, capacity, and context
- Always use data to make your point.
- Look for related items in the flipcharts for more ideas/inspiration
- Talk to others in the room that also have information or knowledge
