World Café Handout: Outcomes to place along the Pathways between Agriculture and Nutrition

- Diversity of foods, both plants and animals, produced by households for home consumption increased
- Adoption by households of nutrition-enhancing/preserving food processing/handling/storage technologies and practices increased
- Household dietary diversity from purchased foods increased
- Household purchases of non-food items that can improve health, drinking water quality, personal hygiene, and sanitation increased
- Year-round access to five or more food groups (from purchases and own production) increased
- Women’s decision-making power on production and expenditures increased
- Women have adequate time to care for themselves and children
- Use of labor-saving technologies by women of reproductive age direct beneficiaries increased
- Production of nutrition-rich value chain commodities increased
- Production of nutritious convenience foods that are derived from nutrition-rich value chain commodities increased
- Introduction of nutrient-fortified foods to market increased
- Safety of value chain commodities and derived food products improved
- Availability of NRVCC in local markets increased
- Affordability of NRVCC increased
- Value chain actors’ awareness of possible adverse health and environmental impacts from their activities increased
- Consumer awareness of benefits of consuming nutrient-rich foods increased

Illustrative Activity Outcomes from the Global Food Security Strategy¹

- Increased access to diverse and nutritious foods
- Increased demand for diverse and nutritious foods
- Increased commercial production of safe and nutritious food products, including fortified foods
- Increased availability of evidence based food information for consumers
- Improved food safety systems
- Improved safe food handling practices
- Increased access to nutrition services
- Increased access to nutrition services for adolescent girls
- Well-functioning sanitary and phyto-sanitary systems
- Increased women’s leadership skills and opportunities
- Increased women’s decision-making power
- Strengthened women’s access to financial services
- Improved quality – and safety - of produce that meets market standards
- Diversified livelihoods risk
- Increased household and community assets, including savings
- Increased adoption of climate smart practices
