TOPS IPM and FS
January 2017
Post Training Survey Results

Total responses received: 15

Presented at the CMAF Spring Meeting on May 4, 2017
Survey Responses Received From:

- ADRA International
- Kansas State University (4)
- Mercy Corps (2)
- Norwegian Refugees Council
- PCI (2)
- Sun Mountain International
- TOPS/Save the Children (2)
- USAID (2)
Q1: Did you participate in the training in person or via webinar?
Q2: Did you provide a debrief or training to your team upon return?
Q3: Please select topics/activities that you debriefed or trained colleagues on after attending the training

Q4: Do you have any IPM/fumigation safety trainings planned in the next 6 months?
TOPS will be conducting a commodity management workshop in September 2017 for new DFAP awarded in DRC. Fumigation safety will be covered.

We did one training in Bangladesh in March. We are planning a second training in Ethiopia late May.

It will be conducted in the Philippines' National Food Authority. There will be no debriefing/training per se this year. It will be a training proposal for submission to our human resource dept and request for budget funding if approved. The said training will be for our in-house pest control officers.

It will be carried out in May, aimed at technical personnel of the project, and will take place in Jinotega.

Ethiopia, May 18-19

Sun Mountain has small training sessions related to fumigation/IPM integrated into larger trainings that we do on a regular basis.
Q5: Do your field teams now have the information required to purchase fumigation safety equipment including masks & gas detection equipment for your organization/projects?
Q6: Since attending the training have you been able to ensure that fumigation management plans (FMPs) are being developed for all fumigation activities for your organization/project?
Q6 Continued: If NO, please comment and explain any obstacles

Not applicable as TOPS does not implement any food assistance program.

Not yet, we're yet to develop the FMP for our title II project.

Since I am the lead person in our company about grain postharvest pest management, I will be spearheading the updating of our in-house fumigation protocol.
Q7: Have you reviewed any of the slides or documentation that was provided either on the flash drive or those posted on the FSN website since the training?
Q8: Are there specific durable resources or references that you think would be helpful for pest management at field locations?
Q9: If you could receive additional training or info related to fumigation safety in the future, what would be most helpful for you?

- Dig deeper into sampling. Sanitary measures in and out of the warehouses.
- Exercises on measurement of gas concentration.
- Material handling before and after fumigation.
- Residual spraying.
- All the training material related to Fumigation practices.
- More training on specific AIs for contact pesticides that can also be used.
- I think the training we had was very detailed. Witnessing or participating in a fumigation exercise.
- Efficacy and safety monitoring of fumigation activity conducted.
- Update on new technology for the fumigation of grains and the use of gas meters.
- Fumigation /Programmatic Environmental Assessment.

Material handling before and after fumigation.
This presentation was made possible by a grant from The Technical and Operational Performance Support (TOPS) Program. The TOPS Micro Grants Program is made possible by the generous support and contribution of the American people through the U.S. Agency for International Development (USAID). The contents of the materials produced through the Micro Grants do not necessarily reflect the views of TOPS, USAID, or the U.S. Government.
